

Introduction

Lens Register is a lens management application for enthusiastic photography people. It provides a graphical user interface which makes organising lenses a snap. The Lens Register enables you to manage large numbers of lenses in general and personal purchases and sales.

The Lens Register Database

Everyone knows about database, it is used to store data. The use of a database is for some obvious reasons like avoiding data duplication, reducing data redundancy, a quick search engine, and greater data integrity. Moreover, the cost of data entry, storage and retrieval are drastically reduced. Additionally, any user can access the data using query language.

Talking in particular about the Lens Register all information stored in one database file but different tables. Images of lenses are stored in separate directory.

Software installation instructions

The Lens Register is a free software ([GPL licensed](#)) primarily aimed at the Linux platform. The software is provided as a compressed file (file name extension tar.gz). Extract the compressed file in a directory of your choice. Change to the installation directory and run the application „Lenses.gambas“.
